

Plainfield High School – FOH Rigging Recommendation

Red and blue lines are the locations of where the I-Beams are in the ceiling. The Red line is too close to the stage and not an optimal lighting position. The blue is where we need to go. From that beam it is 39' - 3" to the proscenium wall above the ceiling. From center stage to that location it is 58'. From the proscenium wall onstage 46'.

For the preferred new position we identified from the I-Beam to the ceiling, cable supports. These supports would have to be removed from the beam and transferred to another location or removed entirely if it is deemed safe. This is a request from North East Stage.

We also noticed the walking planks throughout to the preferred I-Beam making access to it much easier on both sides of the ceiling.
