

PROJECT :

SETH BOYDEN ELEMENTARY SCHOOL
THEATER UPGRADE

Project Overview

The South Orange-Maplewood School District sought an affordable solution to upgrade the theater facilities at Seth Boyden Elementary School (SBES) in Maplewood, NJ. PureTek Group delivered a comprehensive overhaul, addressing lighting, electrical labor (with Sal Electric), rigging (with Northeast Stage), and audio-visual integration (with Keyboard Consultants). In addition to upgrading the technology system, PureTek's commitment extended to a 5-year training and maintenance plan, ensuring staff proficiency and system longevity. The client expressed utmost satisfaction with the final result, meeting their desire for a modernized, efficient, and cost-effective theater facility.

House Lighting Retrofit

Retrofitting existing house lighting with high-output LED lamps is a cost-effective solution that saves on labor and material expenses. It is imperative that the lamps and dimming system have the functionality to smoothly dim to 1% in order to ensure optimal theatrical lighting for performances.

5-Year Training and Maintenance

PureTek Group's 5-year training and maintenance plan is our commitment to system longevity and staff proficiency. Through annual inspections, maintenance, and retraining sessions, the clients benefit from sustained performance and operational efficiency.
